EDUCATION

East Texas A&M University
M.S., Business Analytics

December 2022

The University of Texas at Dallas
B.S., Accounting

December 2017

TECHNICAL CORE

Microsoft Fabric, Data Pipelines, Dataflows Gen2, Power BI, DAX, T-SQL, Python, Azure SQL, SQL Server, SSAS Tabular, Azure DevOps CI/CD, dimensional modeling, RLS, Oracle ERP, Workday Financials, TM1

EXPERIENCE

Highgate – Irving, Texas

June 2025 – Present

Senior Business Intelligence

- Serve as a core technical contributor to enterprise data-platform modernization for a hospitality portfolio of 400+ hotels, supporting financial, operational, revenue-management, property, regional, and executive analytics for thousands of users
- Design and operationalize Microsoft Fabric analytics capabilities, including workspace setup, security and governance controls, semantic-modeling standards, documentation, user enablement, and Power BI delivery practices
- Build and maintain Fabric Data Pipelines and Dataflows Gen2 that ingest, transform, and move data across the Fabric environment
- Lead migration of legacy on-premises SQL Server workloads to Azure SQL, redesigning database schemas, improving SQL query performance, and establishing an Azure-based export layer while preparing cloud-to-cloud Fabric integration for TM1 workflows
- Drive development and optimization of SQL Server, Azure SQL, and Fabric-backed data structures, including stored procedures, schemas, tables, and views, that support TM1, Power BI, financial planning, and enterprise reporting requirements
- Design Power BI semantic models and executive reporting solutions using advanced DAX and Row-Level Security, enabling governed access to sensitive financial and operational data across portfolio, regional, property, and leadership audiences
- Engineered scheduled TurboIntegrator automation that exports financial actuals, budgets, and forecasts for Otelier-enabled STR benchmarking, Power BI reporting, and downstream finance reporting, replacing manual data-compilation activities with repeatable, controlled delivery processes
- Improve TM1 backend reliability and reporting performance through SQL query optimization, schema cleanup, automated processing, and strengthened data-validation workflows
- Develop and support TM1 cubes and TurboIntegrator processes, integrating financial planning, forecast, budget, actuals, and third-party reporting outputs with Power BI and broader enterprise analytics workflows

ORIX Corporation USA – Dallas, Texas

September 2022 – June 2025

Associate, Business Analytics & Intelligence

- Served as the sole onshore Power BI technical lead for a distributed team of up to five offshore developers, delivering 100+ Power BI, paginated reporting, and analytics solutions across finance, accounting, accounts payable, real estate, treasury, investment risk, investments, and trade operations
- Developed high-adoption Power BI reporting products used by 300+ employees, delivering visibility into financial performance, accounts payable, general ledger and subledger activity, reconciliations, investments, exposures, sustainability, pipeline activity, and executive performance metrics
- Partnered with the Director of Business Intelligence to launch Power BI as a new enterprise platform, contributing to architecture, workspace design, governance, security, user enablement, training, adoption, and technical delivery
- Led end-to-end migration of legacy Spotfire, Tableau, BI Publisher, and Microsoft multidimensional-cube reporting to Power BI, rebuilding reporting logic, semantic models, security, and user-facing analytics within the organization's governed BI platform.
- Designed and maintained Power BI semantic models, advanced DAX measures, and reusable reporting datasets sourced primarily from Azure SQL Managed Instance, Oracle, and enterprise data-integration environments
- Developed governed reporting solutions using Row-Level Security and role-based access patterns, protecting sensitive financial and investment data while enabling appropriate self-service access across business functions
- Owned development and lifecycle management of business-logic layers within a dedicated UDB environment, maintaining schemas, views, fact/dimension structures, and reporting-ready data models
- Managed Dev/Test/Prod database delivery through Visual Studio and Azure DevOps Repos and Pipelines, coordinating source-control merges, CAB/CAD approvals, controlled deployments, and Agile sprint execution across Data Integration, BI, and business teams.

Reporting Analyst II

- Engineered Supply Chain Management analytics solutions supporting 100+ users and 30+ reports across procurement, requisitions, purchase orders, invoices, receiving, inventory, logistics, materials, vendor performance, cost, field operations, and accounting
- Led remediation of a fragmented SCM reporting database by introducing structured schema organization, standardized ingestion practices, and stronger data-management controls for a previously disorganized environment
- Identified authoritative enterprise data sources behind spreadsheet-driven reporting, reduced dependency on ad hoc file ingestion, and partnered with data engineering teams to transition reporting workflows toward governed Azure-based sources
- Built Alteryx ETL workflows to ingest, parse, and transform structured and unstructured data, consolidating reporting inputs and improving the reliability of downstream Power BI analytics
- Designed end-to-end Power BI semantic models and advanced DAX measures for supply-chain reporting; created an Accounts Payable model that traced purchasing activity from requisition through purchase order, invoice, and receiving
- Integrated data across Azure SQL databases, Oracle relational systems, and TIBCO data-virtualization layers, applying complex SQL logic to create reusable, reporting-ready datasets
- Expanded governed self-service analytics by introducing Power BI Analyze in Excel and applying data validation and governance practices across supply-chain and accounting reporting

Reporting and Analytics Analyst

- Developed forecasting, profitability, and pricing analytics using SQL and Microsoft relational database tools to support corporate financial decision-making
- Replaced manually compiled Excel reporting workflows with automated Power Pivot semantic models, improving repeatability, consistency, and access to recurring reporting
- Created and administered executive dashboards across Power BI, Tableau, and Qlik; validated data across sources to identify discrepancies and strengthen reporting accuracy
- Applied SQL, SSMS, and data-audit practices to support reliable financial and operational reporting

Business Intelligence Analyst (September 2020 – November 2021)

- Delivered enterprise financial, operational, and workforce analytics used across corporate and field operations, supporting 1,000+ users and leadership audiences including EVP, SVP, VP, RVP, and regional management across approximately 1,800 centers in 41 states
- Engineered end-to-end reporting solutions from source SQL and embedded business logic through reusable semantic models, dashboards, and decision-support products for financial planning, budgeting, operating plans, ERP, and variance analysis
- Designed and maintained SSAS Tabular, Power BI, and Power Pivot models supporting Finance/Accounting, Operations, and Teammate Services/HR analytics; standardized financial and operational metrics for broad organizational consumption
- Developed SQL queries, DAX calculations, financial models, and automated reporting processes covering revenue, cost of sales, operating expenses, capital expenditures, profitability, and budget-to-actual performance
- Replaced manual and spreadsheet-based reporting, improved model and reporting performance, integrated third-party data, and supported the ongoing enhancement of enterprise analytics capabilities

Financial Systems Analyst (April 2019 – September 2020)

- Administered and maintained Workday Financial Management system as part of the ERP team, supporting planning, reporting, system testing, release validation, configuration, and enterprise process-improvement initiatives
- Contributed to a major Workday Procurement implementation and merger-related systems work, coordinating with business stakeholders and technical teams to document requirements, test releases, validate changes, and support production readiness
- Built and maintained Workday reports, conducted financial analysis, automated manually compiled Excel reporting with Power Pivot along with various other reporting needs supporting Finance and Accounting stakeholders
- Developed deep working knowledge of Workday financial and General Ledger processes that later informed enterprise BI and financial-reporting solutions
- Translated business-process requirements into workflow documentation, functional requirements, reporting enhancements, and automation recommendations

Staff Accountant (September 2018 – April 2019)

- Performed monthly P&L margin variance analysis and communicated operating performance across multi-site business centers
- Processed and validated financial and operational transactions flowing into the Workday General Ledger across 37 states, ensuring accurate financial reporting and operational accountability
- Partnered with regional managers and senior leadership to validate activities affecting EBITDA
- Prepared balance-sheet reconciliations, resolved reconciling items, and identified process-improvement opportunities

Senior Care Centers – Dallas, Texas

March 2018 – September 2018

Staff Accountant

- Responsible for the day-to-day accounting, monthly close and financial reporting for 8 regional facilities
- Prepared monthly financial statements, expense variance analysis and consolidated financial statements
- Prepared amortization schedules for 13 prepaid accounts
- Performed expense-variance analysis, balance sheet account reconciliations, amortization schedules, and revenue, rate, accounts-receivable, and cash reconciliations.
- Reconciled Bank accounts for all regional facilities, along with other various cash duties as needed
